

ALGORITHMS AND DATA

ARTIFICIAL INTELLIGENCE

CONTACT

AD@CATIE.FR

Working on each and every topic from numerical simulation to Blockchain and Artificial Intelligence

Made up of a dozen experts in Data science with both mathematics and Information Technologies knowledge, the Algorithms and Data Department is specialized in algorithms and in the **latest data processing technologies** from **numerical simulation** to **blockchain** and Artificial Intelligence, i.e. fields for which companies have high expectations but also a lack of internal knowledge.

We have built a team around complementary skills in order to address the data exploitation as a whole. Our experts work on **cloud computing** and data architecture, but also in the **whole area of Artificial Intelligence**: natural language processing, speech-to-text technologies, computer vision, machine learning and deep learning.

CATIE can help you to master all these aspects.

Our platform dedicated to Artificial Intelligence

Our team has developed **Vanilla** to help companies access Artificial Intelligence by offering working and calculation environments including technological building bricks, use cases and tutorials to facilitate the understanding and implementation of these bricks.
